storek

ANSWERS, DELIVERED.

FOR COMPANIES THAT WANT TO TRUST THEIR NUMBERS

Make sense of your data. Then know it's right.

Storek takes the spreadsheets, exports and systems you already run on, works out how they fit together, and answers in plain English. **Every number is checked against the data it came from**, and everyone works from the same definitions: one place the whole company can rely on.

1 MAKE SENSE OF IT

We do the heavy lifting.

- **Bring it as it is.** Spreadsheets, big exports and connected systems, messy headers and all. No clean-up project first.
- **It finds how things connect.** Storek reads the values themselves to work out which tables relate, so customers, orders and tickets line up without a data team.
- **Every row accounted for.** Each load is counted against its source and fails loudly instead of quietly landing short.
- **It notices change.** New columns and refreshed files are flagged, and dashboards follow the newest version.

2 DOUBLE-CHECK IT

Answers show their work.

- **Ask in plain English.** Get the answer, the chart, and the exact query that produced them.
- **Numbers are checked before you see them.** Each figure is traced to the rows behind it. What can't be traced is flagged, with the reason in plain words.
- **It won't invent to be helpful.** Ask about a customer group that doesn't exist and it asks which real one you mean.
- **Same question, same answer.** A checked answer is kept and re-run the same way for whoever asks next.

3 ONE PLACE TO TRUST

Everyone on one page.

- **Definitions with a rulebook.** "Churn", "active customer": written once, versioned, every change with a reason. A definition that contradicts another is refused.
- **Dashboards that hold still.** Change one chart by asking and the rest stay exactly as they were. Full history, one-click undo.
- **Reports that explain themselves.** Branded PDFs with a method page listing the query behind every number.
- **Your own AI tools, same truth.** Connect the assistant you already use: read-only, same definitions, same protections.

WHERE YOUR TEAM WORKS, EVERY DAY

Chat
Questions in your own words, answers with receipts.

Dashboards
Pin an answer, build a board, click any point to dig in.

Tables
Living grids with your own columns, review steps and sign-off.

Reports
Board-ready PDFs in your brand, method included.

Whiteboard
A canvas of live charts, tables and diagrams you can move and restyle.

Connector
The same governed data inside the AI tools you already use.

SEALED What's private stays sealed.

Personal data, spotted
Names, emails, card and ID numbers are spotted automatically as data arrives.

Mask, tokenize or block
Hide the value and keep its shape. Counts and matches across tables still work.

Reveal by person, by field
Granted on purpose, re-checked on every question, taken back instantly.

Clean-room lock
One switch turns off every reveal for everyone, administrators included.

A workspace of your own
Your own databases, storage and compute, in the US or EU. Nothing shared with other customers.

When unsure, it withholds
If a protection cannot be certain, the answer stays covered. It fails closed.

See exactly what they see
Single sign-on, departments, and "view as" any user, with every use recorded.

A trail without the secrets
The audit log records who saw what kind of data and when, never the values themselves.

THE HONEST PART

Storek does not promise to be right about everything. It promises you can check: every answer arrives with its sources, and anything it could not confirm says so.
